

Star Conveyor is a Material handling system, designed for transportation on pallet or directly on the chain. Our most powerful system manages goods weights up to 200 kg per pallet.

CS930

Ingeniously simple

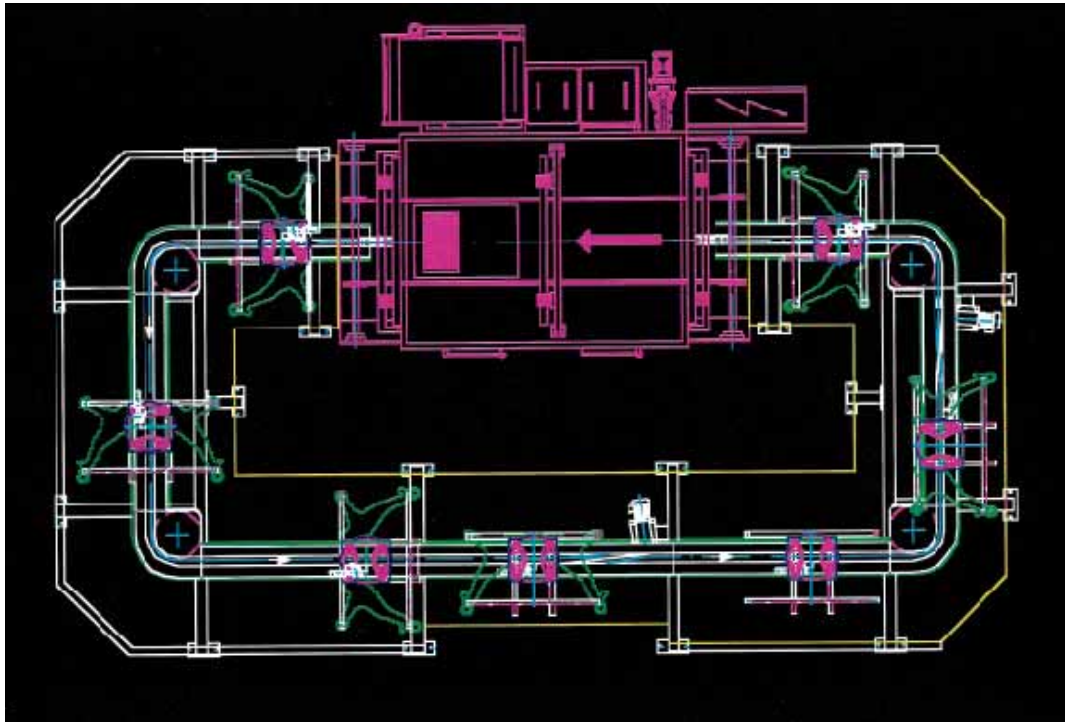

A system intended for heavier goods for interlinking and controlling of flexible flows, the system is unique in that friction can be adjusted at various sections of the system to achieve optimal friction characteristics.

CS930

The carrier pallet yoke is manufactured from aluminium profile with integrated support wheels. This construction serves as a shield against debris and eliminates crushing risks.

The carrier plate varies in design, depending on customer needs and wishes. Alternative materials are aluminium, steel or plastic.

Basic Specifications

Conveyor type: Carrier system

Chain: Plastic chain

Object weight: Up to 330 lbs. (150 kg)

Special

- Pick and place
- Floating Pick-Up-Stations
- Pushers
- Coding
- Fixing stations with high precision
