

Star Conveyor is a Material handling system, designed for transportation on pallet or directly on the chain. Our most powerful system manages goods weights up to 200 kg per pallet.

## CS930-S

Ingeniously simple

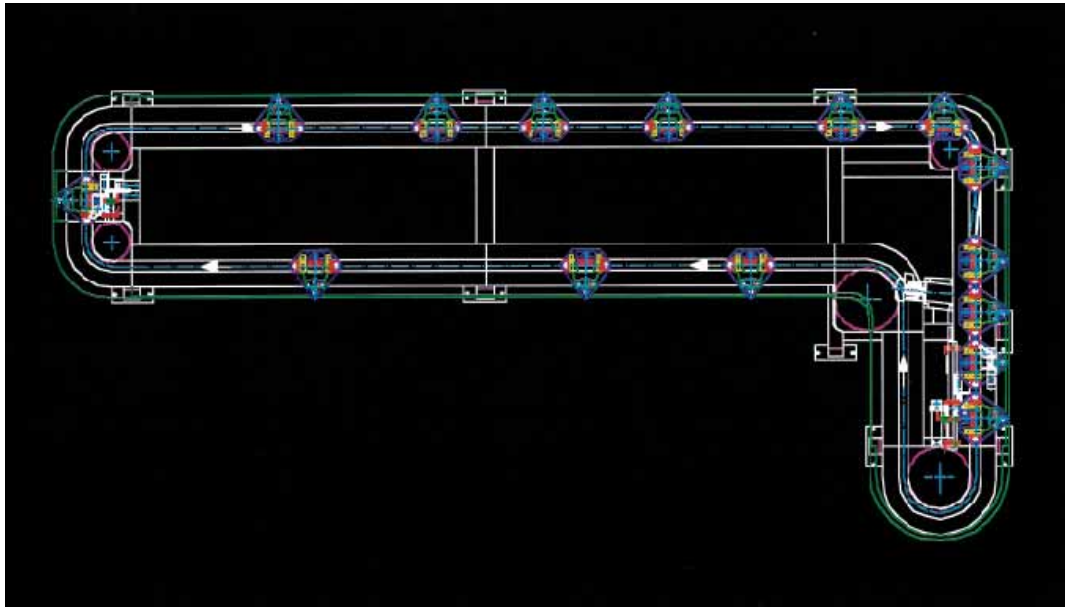

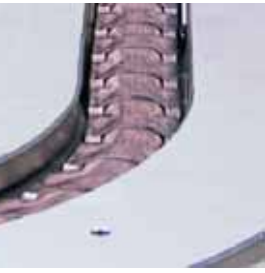

A system for interlinking and controlling flexible flows, the system has been developed to provide smoother and more stable travel when objects are large and unsymmetrical, or when there are several different products on the same pallet. Compared with conventional pallet systems, the supporting wheel design makes it possible to transport heavier objects through distribution of object-weights on the track rails.

## CS930-S

The pallet is a completely customer-adapted product. We design everything from basic solutions to the more advanced solutions that can easily transport up to eight objects on the same pallet. And even more if the customer wishes. Our expert designers have many years of experience and are accustomed to making adaptations for various circumstances.

## CS930-S

### Basic Specifications

Conveyor type: Pallet system with support wheels

Chain: Plastic chain

Object weight: Up to 88 lbs. (40 kg)

### Special

- Pick and place
- Floating Pick-Up-Stations
- Pushers
- Coding
- Fixing stations with high precision
